

oscident[®]

Our specialty: the oscillating interdental reduction of the size of the teeth

We at oscident are a dental company specializing in selected high quality products for modern orthodontics.

Our focus is on the simplified mechanical reduction of interdental space in orthodontic processes, restored prosthetics, or in the prophylaxis.

Short stroke = large effect.

Our aim is to create space through the systematic removal of contact points, by smoothing, by removing the plaque, as well as the final polishing of the teeth, with the help of specially designed instruments with an EVA contra angle hand piece. In this way we optimize your orthodontic processes and support you in focusing in on your patients. We at oscident offer optimal solutions for your innovative orthodontic- and/or dental practice. This knowledge ranges from orthodontics over prophylaxis up to the area of prosthetics.

oscillating
EVA contra angle hand piece

With us, you and your personal counseling are our first priorities

Together, we will find an individually tailored system to meet your specific needs, thus insuring trouble-free use in your practice.

In the mechanized method with oscillating instruments, the stroke of the EVA contra angle hand piece provides for a 5 times faster material removal rate in contrast to a manual removal with abrasive strips. The instruments work simply and are minimally-invasive, and ensure with their efficiency large savings in time and cost.

EVA contra angle hand pieces are extremely versatile

Orthodontics

Creating space: Ideal for use by interdental enamel- or contact point reduction (IRS). Optimal usage with stripping files such as G5-ProLign, Intensiv Ortho-Strip or CA Stripping Tool.

Prophylaxis

Cleaning and smoothing Interdental spaces and tissue-conserving root smoothing. Instruments utilizing these techniques are, for example: Profin/EVA Lamineer Tips, Proxocare and Intensiv Rootshape products.

Prosthetics

Preparation and bevelling of preparation steps in crown- and bridgework. Ideally suited for these processes are, in particular, the optimized Proxocare, Profin/EVA Tips and Intensiv Bevelshape tools.

T1 line EVA 11 L contra angle hand piece yellow

This series is ideally suited not only for standard applications, but, in addition, to all professional orthodontics, dental prosthetics and prophylaxis. Because of the flexibility of the file adjustment, this contra angle hand piece is especially well-suited for removing and polishing contact points and for smoothing root surfaces. The high-quality of contra angle hand piece series T1 Line stands out because of its ergonomic design and, thanks to the titanium sleeve, lies feather-light in your hand.

- 2.4:1 Ratio
- Nozzle Spray
- Weight: 65 g
- Stroke movement: 1.1 mm
- With or without Fiber optics
- Warranty: 36 Months

Ti-Max X55L eXtreme Premium Series

NSK Ti-Max X series instruments offer the latest technology, combined with an elegant and highly ergonomic design. They have been developed without compromise; every detail has been given the highest scrutiny. Best possible access to the site being worked on and maximum visibility: These were our priorities in the process of developing the body of this instrument. Great reliability and superior comfort for user and patient alike reflect our expertise and defines the instrument's state-of-the-art technology.
